

COP 2019 Planning for TRACE

Country Framework for Sustained Epidemic Control

Shift from broad service delivery to locally-led, targeted service delivery, & above-site systems

What does this mean for TRACE in COP 2019?

- Scaling surveillance with fidelity to make existing programming more efficient
 - Expanding TRACE to national coverage
 - Linking TRACE to CBS
 - Establishing a response strategy with ongoing monitor to measure epidemic impact (new infections vs. mortality)
 - Target your programming to where it's needed the most

Surveillance to Program continuum
