

Return of Results

WHEN RETURNING RESULTS:

- Explain recency result does not change healthcare management
- Emphasize referrals and linkage to HTS services
- Report any adverse events, such as IPV, per routine procedures
- Encourage partner testing irrespective of recency status

No result returned

WHY NOT

- Results cannot be meaningfully interpreted at the client level.
- BUT useful at community level: Gives us a better understanding of where and among whom new infections are occurring.

PARTNER NOTIFICATION

- Describe options for notifying partner: **client referral**, **provider referral**, **contact referral**
- Discuss how the client can tell the partner to get tested.
